Adhesive

Axiom Ltd. offers High-Tack, a one component adhesive with high grip based on advanced polymer technology. The adhesive is odorless, neutral and free of silicone and isocyanides, reports the company. The low-VOC adhesive cures with atmospheric moisture to form a durable seal. It is available in 290-ml cartridges in white; 12 cartridges per case.

See our ad on page 28.

Adhesive Tips And Cartridges

Integra Adhesives Inc. offers its newly designed Static Mixing Tips and Cartridges. The 250-ml Adhesive Cartridges and Bayonet Mixer Tips “with wings” are made in North America and sold through the company’s distribution network. The cartridge body is molded from impact-resistant Nylon 6 to eliminate freight damage or breakage in shop use and is also recyclable in most jurisdictions. Glass fiber-reinforced polymers strengthen the cartridge to reduce side-wall flex and improve cure performance, reports the company. In addition, the coaxial outlet places the activator in the center of the adhesive stream to pre-blend components prior to static mixing. The “Quick Lock” attachment method provides a secure seal, and the spiral mixing element reduces back pressure for even cures and flow.

See our ad on page 35.

Sink Installation

Betterley Industries has developed an installation system for undermount sinks in laminate countertop installations. The system simplifies traditional methods by providing tooling with preset off-set dimensions. From the first step to the last, the integrated system performs without measuring or adjustments. Dust extraction is incorporated in all routers for a clean work environment, consistency, safety and extended bit life.

See our ad on page 19.

Indicate #12 on Reader Response page or go to surfacefabrication.com/ProductIQ

V-grooving Machinery

Monument Toolworks offers the Compact V, a v-groover designed for solid surface v-grooving and backsplash coving for small- to mid-size fabricators. The 800-lb. machine uses industry standard carbide inserts, and no adjustments are required after changing inserts. It also offers a built-in cove station and has a 5-ft.-long adjustable fence that can be adjusted with the stainless steel guide assembly. The machine comes complete with tooling mounted on a roll-around and ready to run.

See our ad on page 28.

Indicate # 13 on Reader Response page or go to surfacefabrication.com/ProductIQ

Installation Cart

The Aluminum Install Cart from Groves Inc. features 8-in. pneumatic casters that provide a dampening effect over rough terrain, according to the company. The cart offers high ground clearance to maneuver over stairs, thresholds and curbs. The transported material is secured to the cart and protected against scratches by four clamps with neoprene rubber pads.

See our ad on page 20.

Indicate # 14 on Reader Response page or go to surfacefabrication.com/ProductIQ

Digitizer

The NEMI DigiCoder offers the trace function. DigiCoder is a 2- or 3-axis digitizer designed for reverse engineering parts, patterns or templates without point-to-point digitizing. Digitize complex shapes by fastening them to the backboard and tracing with a probe, and digitize basic squares with only a few points. With a few clicks, the captured data is converted and output in several optional formats including a standard .DXF file. The product can be attached to your existing computer network via wired or wireless ethernet. Files can also be transferred via USB jump drive or SD card.

See our ad on page 27.

Material Handling

The Multi-Seam Expansion Kit for the Automatic Seam Setter VC2 by Omni Cubed includes two seam setters with storage case and an accessory coil tube adapter. The kit enables installers to simultaneously join and level two seams, reportedly saving time during installation. Installers may also “chain link” up to four seam setters together for larger seams. Each seam setter and coil tube adapter utilizes pneumatic quick-connect fittings, enabling installers to apply multiple seam setters to one vacuum pump. See our ad on page 22.

Indicate # 16 on Reader Response page or go to surfacefabrication.com/ProductIQ

Hand And Power Tools

Festool is offering new products through Select Machinery Inc. The Festool

Kapex KS120 Compound Miter Saw will also be available through the company. The lightweight dual-bevel saw has a 12-in. miter saw capacity in a compact 10-in. design.

The saw features precise cuts, dust extraction, micro-adjustable bevel control, forward rail system, quick-release fences, variable speed, dual laser guides, rapid miter setting with cam-action lock system and the Fastfix blade change system. See our ads on page 32.

Indicate # 17 on Reader Response page or go to surfacefabrication.com/ProductIQ

Saw Blade

Pearl Abrasive offers the REACTOR PRO with a 25-mm diamond segment height. The tool is an addition to the Reactor Series developed using A.D.M. (Advanced Diamond Matrix) technology, a process that replaces a random clustering of diamonds with an engineered diamond matrix. According to the company, this allows the travel speed of the saw to increase without increasing amperage of the motor. In addition, the blade is designed to give the operator extended life. It is available in 14, 16 and 18 in. for cutting granite, engineered stone and other natural stone.

See our ad on page 3.

Indicate # 18 on Reader Response page or go to surfacefabrication.com/ProductIQ

Vacuum Equipment

The UniMove unit from UniTech allows one operator to handle large, heavy sheets and finished goods. The equipment

has eight model ranges with capacities of up to 1,000 lbs. and a large selection of standard suction feet to handle a wide variety of objects. Contact surfaces are allowed to be uneven, flexible, rough or porous due to the patented control valve design, which automatically adjusts for solid surfaces, porous surfaces and varying load weights. See our ad on page 29.

Indicate # 19 on Reader Response page or go to surfacefabrication.com/ProductIQ

Sanding Ball

Performance Abrasives offers the Wavy Edge Scuff & Buff Ball. Made with non-woven material, the ball is available in the following grits: tan (60G), green (180G), maroon (320G), grey (600G) and white (non-abrasive). The ball is made from a stack of individual wavy edge discs that are interchangeable and replaceable. Diameters available are 2, 3 and 4 in. Shaft lengths available are 2 ½, 3 ½ and 5 ½ in. with a ¼-in. diameter shaft. The product works in a bowl or radius area to sand, finish or polish. See our ad on page 27.

Indicate # 20 on Reader Response page or go to surfacefabrication.com/ProductIQ

Restoration Kit

Dani Designs offers an E-stone restoring kit. The kit matches the factory finish from many E-stone manufacturers. It can

sand out scratches, dull haze or damage, and top polish the damaged area back to match the surrounding undamaged area, reportedly turning a throw-away sheet of surfacing materials into a fully usable sheet. The system has removed scratches as deep as 50-grit diamond grinding wheel marks, white hazy burnt polyester and the flattening and polishing of deck seams. The kit comes with a 78-min. training DVD.
